U.S. Patent and Trademark Office PTO-326 (Rev. 11/00)

Part of Paper No.

Serial No. 10/066,455 Art Unit 1712 must indicate which are readable upon the elected species. MPEP § 809.02(a). Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103(a) of the other invention. Restriction to one of the following inventions is 2. required under 35 U.S.C. § 121: Claims 1-25, drawn to hardeners, classified in Class 987, subclass 140. II. Claims 26-30, drawn to advanced or cured epoxy resins, classified in Class 528, subclass 89. III. Claims 31-37, drawn to epoxy resins, classified in Class 549, subclass 517. The inventions are distinct, each from the other because of the following reasons: Inventions of Group I and of Group II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other

Serial No. 10/066,455

Art Unit 1712

than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a hardening agent for polymers bearing isocyanate groups and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as an intermediate for preparing polyesters or polyamides and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should

applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

- 7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 8. If the invention of Group I is elected to fulfill the restriction requirement, one of the species of hardeners A-I of claim 1 should be elected. Also elect whether Q or Q' whichever is required is elected as the open structure or the one with the phosphorus containing ring system.
- 9. If the invention of Group II is elected to fulfill the restriction requirement, the structural fragment EP should be elected as the biphenyl structure of claim 7 of page 56 or as the phenylaldehyde novolak epoxy resin backbone and Q should be selected as the open structure or the one with the phosphorus containing ring system.

Serial No. 10/066,455

Art Unit 1712

- 10. If the invention of Group III is elected to fulfill the restriction requirement, one of the epoxy resin EP-A through EP-I of claim 31 should be elected and also further elected whether Q or Q' is the open structure or the one with the phosphorus containing ring structure.
- 11. This restriction/election was judged too complex for telephonic presentation.
- 12. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mr. Aylward whose telephone number is $(703)\ 308-2372$. The examiner can normally be reached on Monday through Friday from 7:30 to 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Dawson, can be reached on (703) 308-2340. The fax phone number for this Group is (703) 872-9310.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661.
